

PharmApp

Staging Validation - Test Manual

Version 1.0 | 2026-09-26

Environment: mediexchange-staging (isolated staging Firebase project - NOT production)

1. Purpose & scope

This manual guides testers through a full end-to-end validation of PharmApp on the isolated STAGING environment. Staging is a separate Firebase project; it does NOT affect production or real customer data. The goal is to validate the new features (pharmacy license workflow, trial subscription, medicine requests in purchase and exchange modes, mobile-money withdrawal) before they are promoted to production.

2. Test environment & access

- Pharmacy app: <https://mediexchange-staging.web.app>
- Admin console: <https://mediexchange-staging-admin.web.app>
- Admin login: super admin credentials: ask the staging owner (never versioned)
- Use any modern desktop browser (Chrome recommended).

3. Test data conventions

- Register EVERY test pharmacy with an email ending in @promoshake.net. This is required - otherwise wallet funding via the Sandbox screen is rejected (NOT_TEST_ACCOUNT).
- Ghana license number format: GH-#### (for example GH-1234).
- For marketplace tests, both pharmacies must be in the SAME city (use Accra, Ghana).
- Valid MTN Ghana number: +23324XXXXXXX. A Vodafone-prefix number (+23320XXXXXXX) must be rejected.
- Cameroon is a country where no license is required (useful for the no-license path).

4. Known non-blocking issues

These are known cosmetic issues. Do NOT mark a test as Fail because of them - note them instead.

- Registration: a 'Registration failed' message may appear EVEN WHEN the account was actually created. Verify the account exists (try logging in) before deciding.
- Wallet currency: a Ghana wallet may show XAF instead of GHS. This is cosmetic.

5. How to run a test and report results

- Open the test cases workbook (staging_validation_test_cases.xlsx).
- Execute each test case in order (some depend on previous ones - see Preconditions).
- Record: Actual Result, Status (Pass / Fail / Blocked), Severity if failed, your name (Tester), the Date, and Notes.
- Capture a screenshot for any failure and reference its file name in the Notes column.
- When finished, save and return the workbook. Results will be uploaded and analysed.

6. Recommended end-to-end flow

The test cases follow this storyline:

- Register a Ghana pharmacy (license workflow) and a Cameroon pharmacy (no license).
- As admin, verify the Ghana pharmacy license.

- Add inventory and fund the wallet (Sandbox screen).
- Create and complete a PURCHASE medicine request between two pharmacies.
- Create and complete an EXCHANGE (barter) medicine request.
- Verify cross-mode rejection rules.
- Perform a wallet withdrawal (valid and invalid cases).
- Walk the delivery through Pickup -> Delivered on the Exchange Status screen (see below).

6b. Delivery demo panel (staging-only)

Once an offer is accepted, the Exchange Status screen shows a purple 'Demo actions (staging only)' panel that lets the buyer OR the seller walk the delivery through its states without a real courier. The panel is invisible on prod builds.

- Status 'pending' -> click 'Pickup' -> status becomes 'picked_up'.
- Status 'picked_up' -> click 'Delivered' -> the real settlement runs: buyer wallet debited, seller wallet credited, inventory transferred. For exchange, both items swap in the same transaction.
- Status 'delivered' -> nothing more to do; create a new proposal to replay.
- Status 'failed' / 'cancelled' -> orange 'Reset delivery' button restores the delivery to 'pending' so the flow can be replayed.
- Delivery status updates in real time (no manual refresh between clicks).
- The caller must be either the buyer or the seller of the deal AND use a @promoshake.net email. Any other account is rejected with 'permission-denied'.

7. Test cases (overview)

Full steps and expected results are in the Excel workbook. Summary below:

Test ID	Module	Scenario	Priority
TC-REG-01	Registration	S1	P1
TC-REG-02	Registration	S2	P1
TC-REG-03	Registration	S2	P2
TC-REG-04	Registration	-	P2
TC-AUTH-01	Authentication	-	P1
TC-GATE-01	Marketplace gate	S7	P1
TC-ADM-01	Admin - Auth	S3	P1
TC-ADM-02	Admin - License	S3	P1
TC-ADM-03	Admin - License	S3	P1
TC-ADM-04	Admin - License	-	P2
TC-ADM-05	Admin - Country	-	P3
TC-PRO-01	Profile	-	P2
TC-SUB-01	Subscription	-	P2
TC-INV-01	Inventory	S4	P1
TC-INV-02	Inventory	-	P3
TC-INV-03	Inventory	-	P2
TC-INV-04	Inventory	S5	P2
TC-WAL-01	Wallet	S4	P1
TC-WAL-02	Wallet	-	P2
TC-MRP-01	Medicine Request - Purchase	S4	P1
TC-MRP-02	Medicine Request - Purchase	S4	P1
TC-MRP-03	Medicine Request - Purchase	S4	P1
TC-MRP-04	Medicine Request - Purchase	-	P2
TC-MRE-01	Medicine Request - Exchange	S5	P1
TC-MRE-02	Medicine Request - Exchange	S5	P1
TC-MRE-03	Medicine Request - Exchange	S5	P1
TC-PAR-01	Parity rules	S6	P2
TC-PAR-02	Parity rules	S6	P2
TC-WDR-01	Withdrawal	S8	P1
TC-WDR-02	Withdrawal	S8	P2
TC-WDR-03	Withdrawal	S8	P2
TC-NOT-01	Notifications	-	P3
TC-DLV-01	Delivery - Demo	S4/S5	P1
TC-DLV-02	Delivery - Demo	S4/S5	P1
TC-DLV-03	Delivery - Demo	-	P2
TC-DLV-04	Delivery - Demo	-	P3
TC-DLV-05	Delivery - Demo	-	P2

Glossary

pending_verification pharmacy registered but license not yet approved; cannot use the marketplace.

verified	license approved by an admin; full marketplace access; trial starts.
medicine request	a pharmacy asks for a medicine; others make offers (purchase or exchange).
purchase offer	an offer with a price; accepting it debits the buyer wallet.
exchange offer	a barter offer; the seller asks for an item in return; no money moves.
withdrawal	moving wallet funds out via mobile money (MTN Ghana on staging).
